Setting Up a Liferay Development Environment

Before diving into source code development, establishing a proper environment is crucial. Here are

the essential steps:

2.1 Prerequisites

- Java Development Kit (JDK): Liferay 7.x supports Java 8 or higher.
- Database: MySQL, PostgreSQL, or other supported databases.
- Build Tools: Maven or Gradle, depending on project configuration.
- Integrated Development Environment (IDE): Eclipse, IntelliJ IDEA, or Visual Studio Code.
- Liferay Bundle: Official Liferay bundles are pre-configured packages with server and portal installed.

2.2 Installing Liferay Bundle

Download the latest Liferay bundle from the official website, such as:

- Liferay DXP (Commercial)
- Liferay Community Edition (CE)

Extract the bundle and run the server:

```
``bash
```

```
cd liferay-ce-
```

```
./gradlew clean deploy
```

```
````
```

or for Windows:

```
``cmd
```

```
gradlew.bat clean deploy
```

```
````
```

Once the server is running, access the portal via `http://localhost:8080` and proceed with customization.

Creating a Liferay Project with Source Code

Developing custom functionalities involves creating portlets, themes, hooks, or modules. This section focuses on building a modular portlet project, which is the most common extension point.

2.1 Using Liferay Workspace

The recommended approach is to create a Liferay Workspace, a development environment that manages multiple modules.

Steps:

- Create a Workspace:

Using Liferay Blade CLI:

```
```bash
blade create -t theme -p com.example.mytheme my-theme
```
```

Or, create a workspace:

```
```bash
blade init my-liferay-workspace
```
```

- Add a Module (Portlet):

```
```bash
cd my-liferay-workspace

blade create -t portlet -p com.example.myportlet my-portlet
```
```

This creates a structured project with predefined configurations, making it easier to develop, deploy, and maintain.

2.2 Understanding the Source Code Structure

A typical portlet project contains:

- ``src/main/java/``: Java classes, portlet controllers, services.
- ``src/main/resources/``: Configuration files, ``portlet.xml``, ``liferay-portlet.xml``.
- ``src/main/webapp/``: JSPs, CSS, JavaScript, images.
- ``build.gradle``: Build script with dependencies and build instructions.

2.3 Developing Custom Portlets

Key steps:

- Define Portlet Class:

```
```java
package com.example.myportlet;

import com.liferay.portal.kernel.portlet.bridges.mvc.MVCPortlet;

import javax.portlet.Portlet;

public class MyPortlet extends MVCPortlet {

 // Override methods or add custom logic

}
```
```

- Configure ``portlet.xml`` and ``liferay-portlet.xml`` to register the portlet.
- Create JSP Views for rendering UI.

- Add Dependencies: For example, Liferay MVC frameworks, API libraries.

2.4 Deploying the Portlet

Build the project:

```
```bash
```

```
./gradlew build
```

```
```
```

Deploy the resulting `.jar`` or `.war`` file into the Liferay server:

```
```bash
```

```
./gradlew deploy
```

```
```
```

Access the portal, navigate to the Site Builder, and add the custom portlet to a page.

Best Practices for Liferay Development

Creating a scalable, maintainable Liferay project involves adhering to best practices:

3.1 Modular Design

- Utilize Liferay's modular architecture to break down functionalities into manageable modules.
- Follow OSGi best practices for service registration and dependency management.

3.2 Use of Service Builder

- Leverage Liferay Service Builder to generate persistence and service layers, reducing boilerplate code.
- Define entities in `service.xml``, generate code, and customize as needed.

3.3 Version Control and CI/CD

- Maintain source code in repositories like Git.
- Automate build, testing, and deployment pipelines with Jenkins or GitHub Actions.

3.4 Performance Optimization

- Cache data where appropriate.
- Minimize server calls and optimize database queries.
- Use lazy loading for heavy resources.

3.5 Security

- Implement proper user permissions.
- Sanitize inputs.
- Use HTTPS and secure sessions.

Sample Source Code Snippet: A Basic Portlet

Here's an example of a minimal portlet class:

```
```java
package com.example.myportlet;

import com.liferay.portal.kernel.portlet.bridges.mvc.MVCPortlet;

import javax.portlet.Portlet;

public class HelloWorldPortlet extends MVCPortlet {

 // Custom logic can be added here

}
```
```

And a simple JSP view (`view.jsp`):

```
```jsp
```
