- Use a multimeter to verify voltage (should be around 12V or higher).
- Confirm the battery has sufficient charge.

- Test Ignition Switch:

- Use a wiring diagram to identify the control wire.
- Check for voltage at the ignition switch output when in "Start" position.

- Verify Relay Operation:

- Listen for a click when turning to "Start."
- Swap relay with a known good one if necessary.

- Inspect Neutral Safety Switch:

- Test for continuity in the "Start" position.
- Adjust or replace if faulty.

- Test the Starter Solenoid and Motor:

- Bypass the relay temporarily with a jumper wire to confirm motor operation.
- Replace the starter if it does not engage or spin.

Expert Tip: Always consult the specific Kenworth wiring diagram for your model year, as wire colors and component placements can vary.
