They have small bodies, transverse foramina, and bifid spinous processes, enabling neck flexibility and protection of the spinal cord. What are the major muscles of the head and neck described in chaurasia's anatomy? Major muscles include the sternocleidomastoid, trapezius, platysma, suprahyoid and infrahyoid muscles, and muscles of facial expression like orbicularis oculi and orbicularis oris, which facilitate movement, swallowing, and facial expressions. Can you explain the arterial supply to the head and neck as detailed in chaurasia? The arterial supply is primarily from the common carotid arteries, which bifurcate into internal and external carotid arteries. The internal carotid supplies the brain, while the external carotid supplies face and scalp. The vertebral arteries also contribute to the brain's blood supply via the basilar artery. What are the key lymph nodes involved in head and neck lymphatic drainage according to chaurasia? Key lymph nodes include the superficial cervical, deep cervical, submental, submandibular, preauricular, and occipital nodes. These nodes drain lymph from the face, scalp, oral cavity, and neck regions, playing a vital role in immune response. How does chaurasia describe the nerve supply to the head and neck? The nerve supply includes cranial nerves V (trigeminal), VII (facial), IX (glossopharyngeal), X (vagus), XI (accessory), and XII (hypoglossal), along with cervical spinal nerves C1-C4. These nerves control sensation, motor functions, and autonomic functions of the head and neck. What are the common clinical conditions related to the head and neck anatomy discussed in chaurasia? Common conditions include cervical lymphadenopathy, thyroid disorders, nerve injuries (e.g., facial nerve palsy), carotid artery disease, and trauma to facial bones and cervical vertebrae, which are critical in clinical diagnosis and management.
