## Atlas of Endoscopic Major Pulmonary Resections

Understanding the complexities of pulmonary surgery is vital for thoracic surgeons, pulmonologists, and medical professionals involved in thoracic care. The *Atlas of Endoscopic Major Pulmonary Resections* serves as a comprehensive visual and procedural guide that enhances surgical precision, improves patient outcomes, and promotes minimally invasive approaches in thoracic surgery. This detailed resource combines detailed illustrations, step-by-step techniques, and clinical insights to assist practitioners in mastering endoscopic procedures for major lung resections.

## Introduction to Endoscopic Major Pulmonary Resections

Pulmonary resections are critical surgical interventions primarily performed to treat malignant and benign lung conditions such as non-small cell lung cancer, metastatic tumors, and severe infections. Traditionally, these procedures involved open thoracotomies, which, although effective, were associated with significant postoperative pain, longer hospital stays, and increased morbidity.

In recent decades, minimally invasive techniques, particularly endoscopic approaches like Video-Assisted Thoracoscopic Surgery (VATS) and Robotic-Assisted Thoracic Surgery (RATS), have revolutionized pulmonary resections. These methods offer comparable oncologic efficacy with the benefits of reduced pain, quicker recovery, and better cosmetic results.

The *Atlas of Endoscopic Major Pulmonary Resections* provides a detailed roadmap of these advanced techniques, emphasizing the anatomy, operative steps, and nuances specific to endoscopic procedures.

## Overview of Major Pulmonary Resections

Major pulmonary resections typically include:
