Sample MCQ Analysis: A Deep Dive

To illustrate the utility of Bing-sourced MCQs, consider the following sample question:

Question: Which of the following hormones primarily stimulates the secretion of pancreatic

enzymes?

A) Gastrin

B) Secretin

C) Cholecystokinin (CCK)

D) Motilin

Correct Answer: C) Cholecystokinin (CCK)

Explanation:

Cholecystokinin (CCK) is a key hormone released from the duodenal mucosa in response to fats and proteins entering the small intestine. It stimulates the pancreas to secrete digestive enzymes necessary for nutrient breakdown. Secretin mainly stimulates bicarbonate secretion, gastrin primarily influences gastric acid secretion, and motilin regulates interdigestive motility.

This question tests conceptual understanding and the ability to differentiate between hormones involved in gastrointestinal regulation.
