Common Questions and Their Answers

To excel in grade 12 platinum geography, students need to master both theoretical knowledge and practical application. Below are some common questions along with detailed answers to help clarify key concepts.

1. What are the main landforms created by fluvial processes?

Answer:

Fluvial processes involve the movement of water in rivers and streams, leading to the formation of various landforms. The main landforms include:

- **V-shaped valleys:** Carved by river erosion during the youthful stage of the river, characterized by steep sides and a narrow floor.
- **Floodplains:** Flat areas adjacent to rivers that are periodically flooded, formed by deposition of sediments during floods.
- **Meanders:** Curved river bends formed through lateral erosion and deposition, especially in the middle course.
- **Oxbow lakes:** Crescent-shaped lakes formed when a meander is cut off from the main river channel.
- **Deltas:** Landforms formed at the mouth of rivers where sediment deposition occurs as the river enters a standing body of water.

2. How does climate influence the distribution of biomes?

Answer:

Climate is a primary factor determining the distribution of biomes?the large ecological areas with distinct vegetation, animal life, and climate conditions. Key climatic elements influencing biomes include temperature, precipitation, and seasonal variation.

- **Temperature:** Warmer temperatures support tropical biomes like rainforests, while cooler temperatures favor boreal forests (taiga) and tundra.
- **Precipitation:** High rainfall supports lush forests, whereas low rainfall results in deserts or grasslands.
- **Seasonality:** Distinct seasons can influence deciduous forests and temperate grasslands.

For example, tropical rainforests are found near the equator due to consistent high temperatures and rainfall, while deserts are located in subtropical high-pressure zones with low precipitation.
