Sample Questions and Detailed Explanations

To illustrate, here are some typical MCQs, along with detailed explanations to help you understand the reasoning process.

Question 1:

Which of the following best defines biodiversity?

- a) The number of individual organisms in a habitat
- b) The variety of life forms on Earth, including species, genetic, and ecosystem diversity
- c) The amount of biomass present in an ecosystem
- d) The process of natural selection acting on populations

Correct answer: b) The variety of life forms on Earth, including species, genetic, and ecosystem diversity

Explanation:

Biodiversity encompasses the total variety of biological entities, including different species, genetic variations within those species, and the range of ecosystems. It is not just about the number of organisms or biomass but about the diversity of life at multiple levels.
