Sample SHL Java Test Questions and Answers

Practicing with actual questions can be very effective. Below are some sample questions with detailed answers to help you prepare.

Question 1: What is the output of the following Java code?

```
public class Test {  
  
    public static void main(String[] args) {  
  
        int a = 5;  
  
        int b = 10;  
  
        System.out.println(a + " " + b);  
  
    }  
  
}
```

Options:

- a) 5 10
- b) 510
- c) 5+10
- d) Compilation error

Answer: a) 5 10

Explanation: The code concatenates the integer variables with a string, resulting in "5 10" being printed.

Question 2: Which keyword is used to inherit a class in Java?

Options:

- a) extends
- b) implements
- c) inherits
- d) super

Answer: a) extends

Explanation: The `extends` keyword is used to inherit from a superclass in Java.

Question 3: What will be the output of the following code?

```
public class Test {  
  
    public static void main(String[] args) {  
  
        String s1 = "Java";  
  
        String s2 = "Java";  
  
        System.out.println(s1 == s2);  
  
    }  
  
}
```

Options:

- a) true
- b) false
- c) Compilation error
- d) NullPointerException

Answer: a) true

Explanation: String literals are interned in Java, so both `s1` and `s2` refer to the same object, making `==` return true.

Question 4: Which collection class maintains insertion order?

Options:

- a) HashSet
- b) TreeSet
- c) LinkedHashSet

- d) HashMap

Answer: c) LinkedHashSet

Explanation: `LinkedHashSet` maintains insertion order, unlike `HashSet`.

Question 5: How do you handle exceptions in Java?

Options:

- a) Using try-catch blocks
- b) Using if-else statements
- c) Using switch-case
- d) Using loops

Answer: a) Using try-catch blocks

Explanation: Exception handling in Java is primarily done through `try-catch` blocks to catch and handle exceptions gracefully.
